Contribution Title

Name of First Author and Name of Second Author

Abstract Each chapter should be preceded by an abstract (10–15 lines long) that summarizes the content. The abstract will appear online at www.SpringerLink.com and be available with unrestricted access. This allows unregistered users to read the abstract as a teaser for the complete chapter. As a general rule the abstracts will not appear in the printed version of your book unless it is the style of your particular book or that of the series to which your book belongs.

Please use the ‘starred’ version of the new Springer abstract command for typesetting the text of the online abstracts (cf. source file of this chapter template abstract) and include them with the source files of your manuscript. Use the plain abstract command if the abstract is also to appear in the printed version of the book.

1 Section Heading

Use the template chapter.tex together with the Springer document class SVMono (monograph-type books) or SVMult (edited books) to style the various elements of your chapter content in the Springer layout.

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX automatism for all your cross-references and citations. And please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

Name of First Author
Name, Address of Institute, e-mail: name@email.address

Name of Second Author
Name, Address of Institute e-mail: name@email.address
2 Section Heading

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX\ automatism for all your cross-references and citations.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

Use the standard \texttt{equation} environment to typeset your equations, e.g.

\begin{equation}
    a \times b = c ,
\end{equation}

however, for multiline equations we recommend to use the \texttt{eqnarray} environment\footnote{In physics texts please activate the class option \texttt{vecphys} to depict your vectors in \textit{boldface-italic} type - as is customary for a wide range of physical subjects}.

\begin{align}
    a \times b &= c \\
    a \cdot b &= c
\end{align}

2.1 Subsection Heading

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX\ automatism for all your cross-references and citations as has already been described in Sect. 2.

Please do not use quotation marks when quoting texts! Simply use the \texttt{quotation} environment – it will automatically render Springer’s preferred layout.

2.1.1 Subsubsection Heading

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX\ automatism for all your cross-references and citations as has already been described in Sect. 2.1, see also Fig. 1\footnote{If you copy text passages, figures, or tables from other works, you must obtain \textit{permission} from the copyright holder (usually the original publisher). Please enclose the signed permission with the manuscript. The sources must be acknowledged either in the captions, as footnotes or in a separate section of the book}.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.
Paragraph Heading

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX automatism for all your cross-references and citations as has already been described in Sect. 2.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

For typesetting numbered lists we recommend to use the \texttt{enumerate} environment – it will automatically render Springer’s preferred layout.

1. Livelihood and survival mobility are oftentimes outcomes of uneven socio-economic development.
   a. Livelihood and survival mobility are oftentimes outcomes of uneven socio-economic development.
   b. Livelihood and survival mobility are oftentimes outcomes of uneven socio-economic development.

2. Livelihood and survival mobility are oftentimes outcomes of uneven socio-economic development.

Subparagraph Heading

In order to avoid simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Use the \LaTeX automatism for all your cross-references and citations as has already been described in Sect. 2, see also Fig. 2.

For unnumbered list we recommend to use the \texttt{itemize} environment – it will automatically render Springer’s preferred layout.

- Livelihood and survival mobility are oftentimes outcomes of uneven socio-economic development, cf. Table 1.

\textbf{Fig. 1} If the width of the figure is less than 7.8 cm use the \texttt{sidecaption} command to flush the caption on the left side of the page. If the figure is positioned at the top of the page, align the sidecaption with the top of the figure – to achieve this you simply need to use the optional argument \texttt{[t]} with the \texttt{sidecaption} command.
Livelihood and survival mobility are oftentimes outcomes of uneven socio-economic development.

Table 1

</tbody>
</table>

Table foot note (with superscript)

3 Section Heading

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX{} automatism for all your cross-references and citations as has already been described in Sect. 2.
Contribution Title

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

If you want to list definitions or the like we recommend to use the Springer-enhanced description environment – it will automatically render Springer’s preferred layout.

Type 1 That addresses central themes pertainng to migration, health, and disease. In Sect. 1, Wilson discusses the role of human migration in infectious disease distributions and patterns.

Type 2 That addresses central themes pertaining to migration, health, and disease. In Sect. 2.1, Wilson discusses the role of human migration in infectious disease distributions and patterns.

3.1 Subsection Heading

In order to avoid simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Use the \LaTeX automatism for all your cross-references and citations citations as has already been described in Sect. 2.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

If you want to emphasize complete paragraphs of texts we recommend to use the newly defined Springer class option \texttt{graybox} and the newly defined environment \texttt{svgraybox}. This will produce a 15 percent screened box ‘behind’ your text.

If you want to emphasize complete paragraphs of texts we recommend to use the newly defined Springer class option and environment \texttt{svgraybox}. This will produce a 15 percent screened box ‘behind’ your text.

3.1.1 Subsubsection Heading

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX automatism for all your cross-references and citations as has already been described in Sect. 2.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

\textbf{Theorem 1.} \textit{Theorem text goes here.}
**Definition 1.** Definition text goes here.

*Proof.* Proof text goes here. □

**Paragraph Heading**

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the \LaTeX automatism for all your cross-references and citations as has already been described in Sect. 2.

Note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

**Theorem 2.** Theorem text goes here.

**Definition 2.** Definition text goes here.

*Proof.* Proof text goes here. □

**Acknowledgements** If you want to include acknowledgments of assistance and the like at the end of an individual chapter please use the `acknowledgement` environment – it will automatically render Springer’s preferred layout.

**Appendix**

When placed at the end of a chapter or contribution (as opposed to at the end of the book), the numbering of tables, figures, and equations in the appendix section continues on from that in the main text. Hence please do not use the `appendix` command when writing an appendix at the end of your chapter or contribution. If there is only one the appendix is designated “Appendix”, or “Appendix 1”, or “Appendix 2”, etc. if there is more than one.

\[ a \times b = c \]  

**References**

References may be cited in the text either by number (preferred) or by author/year.\(^3\) The reference list should ideally be sorted in alphabetical order – even if reference numbers are used for their citation in the text. If there are several works by the same author, the following order should be used:

---

\(^3\) Make sure that all references from the list are cited in the text. Those not cited should be moved to a separate *Further Reading* section or chapter.
1. all works by the author alone, ordered chronologically by year of publication
2. all works by the author with a coauthor, ordered alphabetically by coauthor
3. all works by the author with several coauthors, ordered chronologically by year of publication.

The styling of references\(^4\) depends on the subject of your book:

- The two recommended styles for references in books on mathematical, physical, statistical and computer sciences are depicted in [1, 2, 3, 4, 5] and [6, 7, 8, 9, 10].
- Examples of the most commonly used reference style in books on Psychology, Social Sciences are [11, 12, 13, 14, 15].
- Examples for references in books on Humanities, Linguistics, Philosophy are [16, 17, 18, 19, 20].
- Examples of the basic Springer style used in publications on a wide range of subjects such as Computer Science, Economics, Engineering, Geosciences, Life Sciences, Medicine, Biomedicine are [21, 22, 24, 23, 25].

\(^4\) Always use the standard abbreviation of a journal’s name according to the ISSN List of Title Word Abbreviations, see http://www.issn.org/en/node/344
